Project Title: Unified Municipal Grievance Portal

Photographs:

Project Description: One-line Project Description: A web-based portal that enables citizens to submit, track, and manage municipal grievances efficiently through a centralized and secure platform.

The Unified Municipal Grievance Portal is a centralized web-based system developed to simplify the process of registering, managing, and tracking municipal complaints. Citizens can use the portal to submit grievances related to garbage collection, drainage, roads, street lights, water supply, and other civic issues. The system allows users to create accounts, securely log in, submit complaint details, view their grievances, and track their current status. Municipal administrators and officers can access submitted complaints, manage grievance records, update complaint statuses, and monitor the overall progress of complaints. The system uses Java 17, Spring Boot 3.3.4, Spring Security, Thyme leaf, Spring Data JPA, H2 Database, Maven, HTML, and CSS. By replacing manual complaint registration with digital grievance management, the portal improves efficiency, transparency, accessibility
